

LN-DMXTCON-4CH-LV DMX Decoder

Product Specifications

SHENZHEN LEYNEW TECHNOLOGY CO., LTD

1.Summarization

DMX Decoer adopts the advanced micro control unit, it receives standard DMX-512 digital control signal and transformed it into PWM signal for driving LED;You could connect DMX module with DMX digital console to achieve dimming or various changes in procedures.

2.Technical Parameters

- 2.1 Working temperature: -20-60 °C
- 2.2 Supply voltage: DC12~24V
- 2.3 Output: 4 channel
- 2.4 External dimension: L165*W65*H40 (mm)
- 2.5 Packing size: L185*W85*H60 (mm)
- 2.6 Net weight: 310g
- 2.7 Gross weight: 389.5g
- 2.8 Static power consumption: <1W
- 2.9 Output current: each channel 4A
- 2.10 Output power: 12V:<192W, 24V:<384W
- 2.11 The controller output frequency: 980 Hz

3.External Dimension

4.Interface specifications

DMX input/output interface

DMX input/output interface: RJ45 Interface

The interface of settings for address code and function

Supply power and load interface

5.Direction for use

5.1 DMX address code settings

Each DMX decoder occupied 3 DMX addresses, adopt coding switch set address, it is a Binary numerical code switch which is setting DMX original address code from 1 to 9, 1 is the lowest, and 9 is the highest,511 address codes could be setted in all.DMX original address code equal aggregate value of the coding switch value from 1 to 9,dial the coding switch upwards(ON is setted 1),the value of bit can be gotten, on the contrary, the value of bit is 0.

DMX signal can be received when coding switch FUN(10)=OFF(ON is setted 0).

example 1:

Look at the following picture,if you want to set 37 as the address code,you can only dial down the first,the third and the sixth code switch, the aggregate value of coding switch value from 1 to 9 is $32+4+1$,that is,the original address code of DMX512 is 37.

Picture 1

example 2:

Look at the following picture,if you want to set 328 as the address code,you can only dial down the ninth,the seventh and the fourth code switch, the aggregate value of coding switch value from 1 to 9 is $256+64+8$,that is,the original address code of DMX512 is 328.

Picture 2

5.2 Other functions direction for use

5.2.1 Testing function:

The tenth bit of coding switch is “FUN”,that is a built-in function button.FUN=OFF shows the DMX decoder function,DMX signal can be received.

The default coding switch1-9 is off:black

Picture 3

1-9 switch OFF: black

Switch 1 = ON: CH1 bright

Switch 2 = ON: CH2 bright

Switch 3 = ON: CH3 bright

Switch 4 = ON: CH4 is bright

Switch 5 = ON: 4 channels are bright

Switch 6 = ON: stroboscopic (6 gears of choice)

Switch 7 = ON: monkey (6 gears of choice)

Switch 8 = ON: water (6 gears of choice)

Switch 9 = ON: the gradient (6 gears of choice)

5.2.2 The speed choice of jumpy changing,gradual changing effect

When testing capabilities, switch is 6 = ON stroboscopic effect, switch 7 = ON monkey's effect, when the switch 8 = ON water effect, switch is 9 = ON gradient effect, every effect has 6 gears of choice:

Switch1-5=OFF :0steps

Switch1=ON:1 steps

Switch2=ON:2 steps

Switch3=ON:3 steps

Switch4=ON:4 steps

Switch5=ON:5 steps(the greatest speed)

Picture 4

When multiple switches are ON, the larger switch shall prevail. When all the dial switch = ON, the decoder speed: the mode speed is 5.

5.3 DMX address code and code figure:

Coded table(1 for Dial up, 0 for Dial down)

coded value	Dial the code value	coded value	Dial the code value	coded value	Dial the code value	coded value	Dial the code value
1	10000000	57	100111000	113	100011100	169	100101010

6. Typical applications

7. Remarks

7.1 Connect the load wire at first, following by the power wire; Please ensure short circuit can not occur between connecting wire before you turn on the power.

7.2 The range of power supply voltage is DC12V-24V, more than voltage range maybe burn out the controller.
